6. Accidental release measures

Personal precautions, protective equipment and emergency procedures
   Keep unnecessary personnel away. For personal protection, see section 8 of the SDS.

Methods and materials for containment and cleaning up
   Stop the flow of material, if this is without risk. Following product recovery, flush area with water. For waste disposal, see section 13 of the SDS.

Environmental precautions
   Avoid discharge into drains, water courses or onto the ground.

7. Handling and storage

Precautions for safe handling
   Avoid prolonged exposure. Observe good industrial hygiene practices.

Biological limit values
   No biological exposure limits noted for the ingredient(s).

Appropriate engineering controls
   Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level.

Individual protection measures, such as personal protective equipment

   Eye/face protection
     Wear safety glasses with side shields (or goggles).

   Skin protection
     Hand protection
       Wear appropriate chemical resistant gloves.

     Other
       Wear suitable protective clothing.

   Respiratory protection
     Use a NIOSH/MSHA approved respirator if there is a risk of exposure to dust/fume at levels exceeding the exposure limits.

   Thermal hazards
     Wear appropriate thermal protective clothing, when necessary.
General hygiene considerations

Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants.

The International Agency for Research on Cancer (IARC) has classified refractory ceramic fiber as a possible human carcinogen (Group 2B) based on sufficient evidence of carcinogenicity in animals, but insufficient data in humans. There has been no increased incidence of respiratory disease in studies examining occupationally exposed workers. Polycrystalline aluminosilicate fibers have not been specifically classified. Based on a sample analysis of Fraunhofer Institute fur Toxicology and Experimentelle Medizin, Hannover (Certificate dated October 30, 2007) the material does not contain WHO fibers (length >5 µm, diameter ≤3 µm, relation length/diameter > 3/1).
